# NEWS 2025

## THE FUEL IS NEW, THE CRAFT REMAINS.

RAIS and Attika present a new selection of stoves for 2025, featuring a brand-new range of bioethanol stoves and three elegant additions to our woodburning collection.

The new bioethanol models bring you the beauty of fire with minimal emissions and even less effort.

With familiar silhouettes and our signature blend of form and function, they reflect the same attention to detail found in our wood and gas collections.

While the fuel may be new, our values remain the same: timeless design, premium materials, and uncompromising quality.

And just like the rest of our product range, all new models can be customised to fit any style and space.

# BIOETHANOL

## Safety first

Our bioethanol stoves are equipped with advanced safety systems that monitor the entire combustion process. If any irregularities are detected, the burner automatically shuts down, ensuring a safe and reliable fireplace experience.

## Flexible installation

Our freestanding bioethanol stoves offer flexible placement options and can be positioned almost anywhere, as no flue connection is required. Built-in models require a flue connection, but can be integrated into walls or custom interiors, giving you the creative freedom to design your space.

## Cosy ambience

Experience the warmth and charm of an authentic fire with minimal effort. Bioethanol stoves require no complex installations, maintenance, or firewood, but offer an instant cosy ambience.

## Smart control

Create the perfect atmosphere with the touch of a button. With our intuitive app or remote control, you can easily ignite or extinguish the flame and adjust its height to suit your needs.

## Non-fossil, bio-based fuel

Bioethanol is a renewable, non-fossil, and bio-based fuel derived from the fermentation of sugars or starch-rich crops such as sugarcane, corn, or grains.

## Clean combustion

Bioethanol burns cleanly, producing no smoke, soot, or harmful particles. The combustion process converts bioethanol into water vapour and carbon dioxide ( $\text{CO}_2$ ), which is reabsorbed by plants during photosynthesis, creating a natural and ongoing energy cycle. This makes bioethanol a carbon-neutral fuel with minimal environmental impact.

## Energy-efficient heating

Our bioethanol stoves feature an optimised combustion system that ensures even heat distribution, high efficiency, and minimal energy loss. Flame height control lets you adjust the heat output to your personal preferences.

## No smoke. No soot. No ash

Enjoy beautiful flames and an authentic fireplace experience with almost no maintenance and cleaning. Our bioethanol stoves burn cleanly, producing no smoke, soot, or ash.

## Fuel purity matters

For optimal performance, all RAIS and Attika bioethanol stoves must be operated with bioethanol that has a purity level between 96.5% and 97.5%.

Using fuel with lower purity can cause unpleasant odours and may damage the stove. It is also important to avoid bioethanol with fragrances or other additives.

CARO 90 BIO

CARO 110 BIO

# CARO BIO

CARO BIO features an elegant, rounded design and optional side windows for an enhanced view of the fire. With a variety of customisation options, from colours and handles to door and window combinations, CARO BIO can be tailored to suit any style and interior. Its compact size makes it perfect for smaller spaces or holiday homes.

VISIO 70 RD BIO

## VISIO 70 RD BIO

VISIO 70 RD BIO is a stylish built-in solution, perfect for subtly dividing spaces while maintaining a unique connection between them. With its modern, minimalist design, the VISIO 70 RD BIO offers an unobstructed view of the fire from three sides, creating a striking focal point in contemporary interiors.

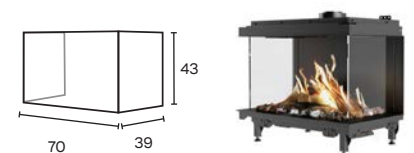

VISIO 70 3S BIO

## VISIO 70 3S BIO

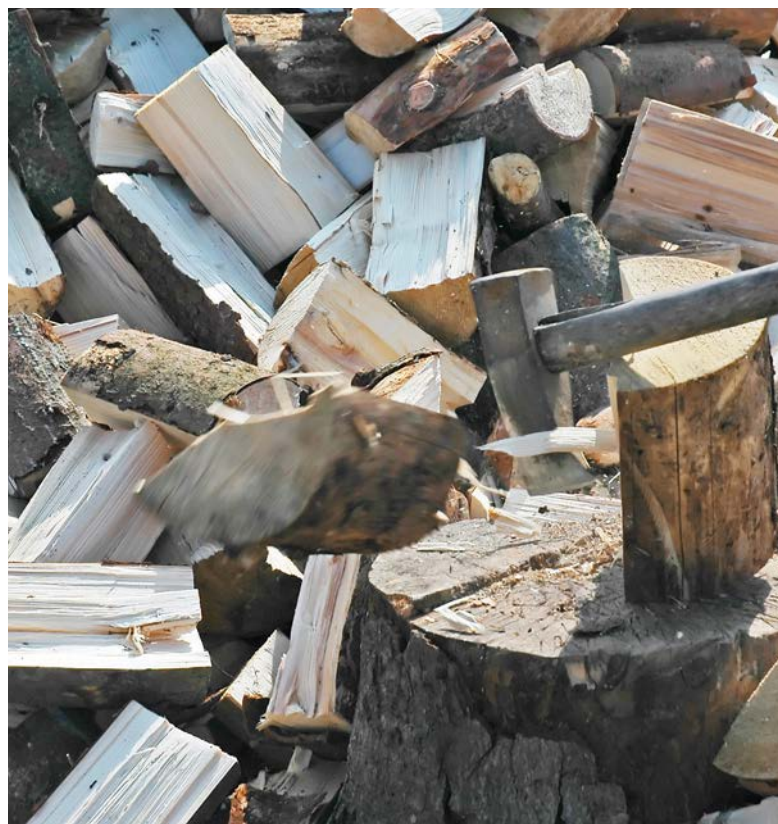

VISIO 70 3S BIO is a built-in solution that gives you the freedom to design your space, integrating the fireplace as a striking, architectural feature in your home. With glass on three sides, VISIO 70 3S BIO offers an uninterrupted view of the flames from multiple angles, adding warmth and visual impact to any room.

## 600 ART

600 ART brings understated elegance to any space with its compact form, clean lines, and minimalist design. Available in front, two-sided, and three-sided versions, it can be placed on a matching base unit, a custom-built platform, or paired with an optional side bench, giving you the freedom to design the perfect stove to match your style and space.

WOOD

OPAL

# OPAL

With its clean lines and sleek silhouette, OPAL brings a sculptural touch to any room. The large glass panel beautifully frames the flames, creating a striking visual focus. Customisation options – including air control, colours, top plates, and handles – allow you to design the stove to suit your personal style and space.

NEXO PORTO

# NEXO SST/PORTO

NEXO brings the beauty of nature into your home with elegant cladding in light natural Porto stone or grey soapstone. Both types of stone absorb and slowly release the heat, keeping your home comfortably warm and cosy for hours after the fire has gone out. Choose between two types of air control, a steel door or a glass door, various handles, and optional side windows.
